

THE VIBE CODING STARTER KIT

Build Real Apps With AI — No Coding Required

by Waseem Nasir • skynetjoe.com

What Is Vibe Coding?

Building software by describing what you want in plain English and letting AI write the code. You DIRECT — AI executes. 92% of US developers use AI coding tools daily. 41% of all GitHub code is now AI-generated.

The 5 Prompts That Build 90% of Apps

► **1 — Foundation:** "Create a [app type] using React + Node.js with: [feature 1], [feature 2], [feature 3]. Clean dark UI. Include auth. Start with file structure."

► **2 — Database:** "Add a [Postgres/Supabase] database with schema: [describe data]. Create CRUD endpoints. Add validation."

► **3 — AI Feature:** "Add AI-powered [feature] that takes [input] and returns [output]. Use OpenAI/Claude API. Handle streaming + errors."

► **4 — Integration:** "Integrate [Stripe/email/calendar]. When [trigger], automatically [action]. Add webhook handler + retry logic."

► **5 — Polish:** "Review entire codebase. Fix bugs, security issues, performance. Add loading states, error boundaries, mobile responsiveness. Production-ready."

Prompt Refinement Framework

ROUND	ACTION	EXAMPLE
1	Describe full app	"Build an invoice generator with..."
2	Fix errors + context	"Auth isn't working because..."
3	Refine UI/UX	"Darker, add animations..."
4	Edge cases + polish	"Add empty states, handle no data..."

★ **Pro tip:** Paste error messages directly. Say: "Here's the error: [paste]. Fix it and explain what went wrong."

The \$0 Tech Stack

NEED	FREE TOOL	REPLACES	SAVINGS
Hosting	Vercel free tier	AWS / Heroku	\$20/mo
Database	Supabase free tier	PlanetScale / RDS	\$50/mo
Automation	n8n (self-hosted)	Zapier	\$200/mo
Email	Resend free tier	Mailchimp	\$80/mo
AI Coding	Claude Code	Hiring a dev	\$5,000+

Your First App (60 Minutes)

1. **0-5 min:** Install Claude Code → `npm install -g @anthropic-ai/claude-code`
2. **5-10:** New folder → open terminal → type your first prompt (Prompt 1 above)
3. **10-30:** Let Claude generate. Ask follow-ups when it pauses.
4. **30-45:** Test locally. Find bugs. Paste errors into Claude.
5. **45-55:** Deploy → `vercel deploy`
6. **55-60:** Share the live URL. You just shipped a real app.
